How to use CBRN-Analysis Default Maps

www.bruhn-newtech.com

Default Maps

CBRN-Analysis has four default maps

1. A Blank map showing a blue background
2. A World map with two layers
 - A green map showing the national borders
 - A coloured map showing world topography
3. A World Enhanced map with some details
4. An artificial map Atlantis for CAX exercises

The blank and the world maps are **not detailed for enough** operational use and serves only as background for other maps

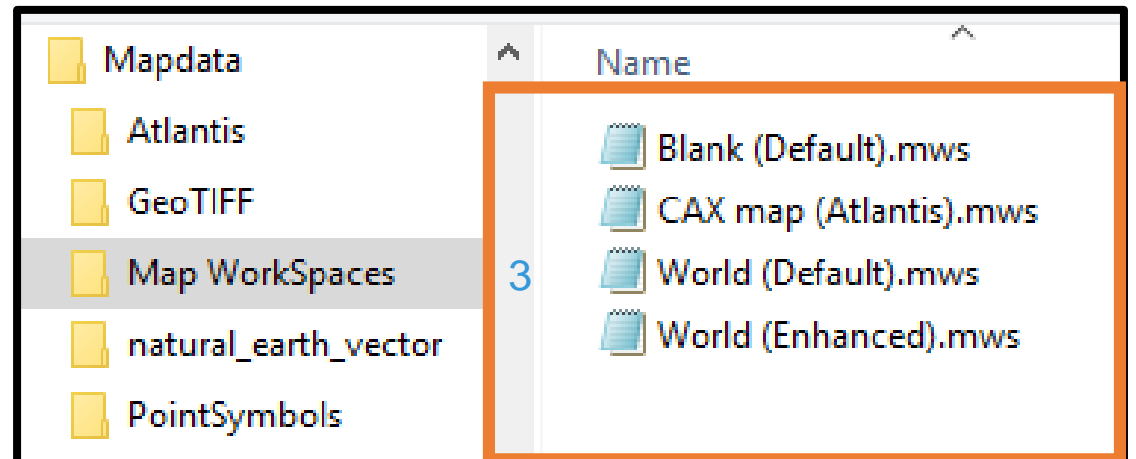

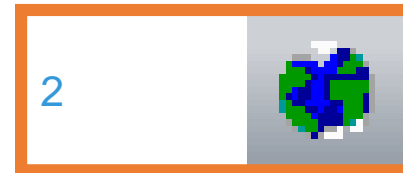

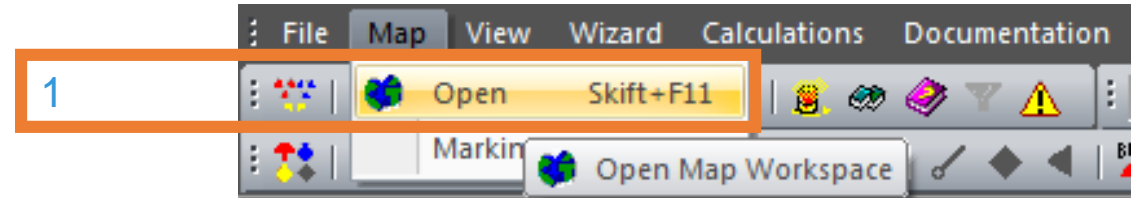

Operational maps should be **provided by the user** for many reasons, but especially due to:

- Specific requirements for each operation
- License restrictions for use of maps

Open Maps

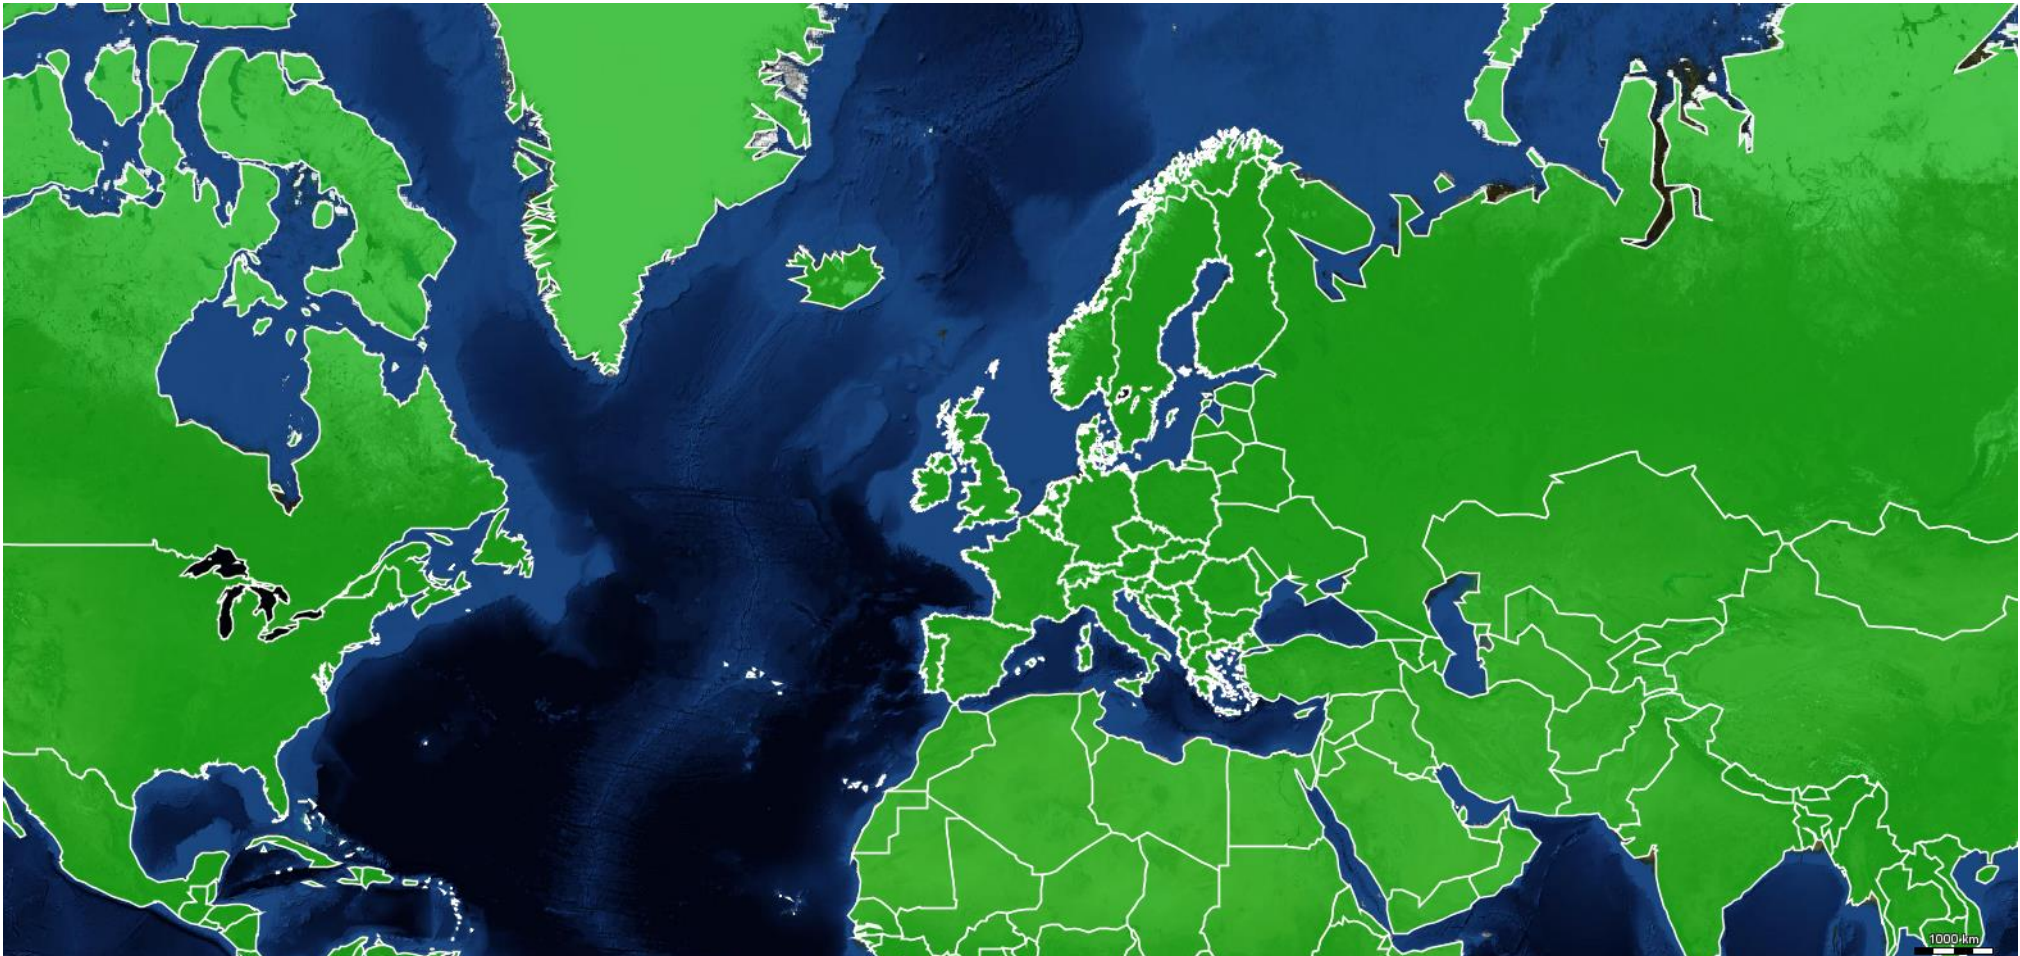

To open a map:

1. Select Menu: Map/Open
2. Or click on the Globe icon
3. Select a map e.g. World (Default).wms
4. Click “Open”

Basic Functions

The World (Default) Map will be shown

Map Tools

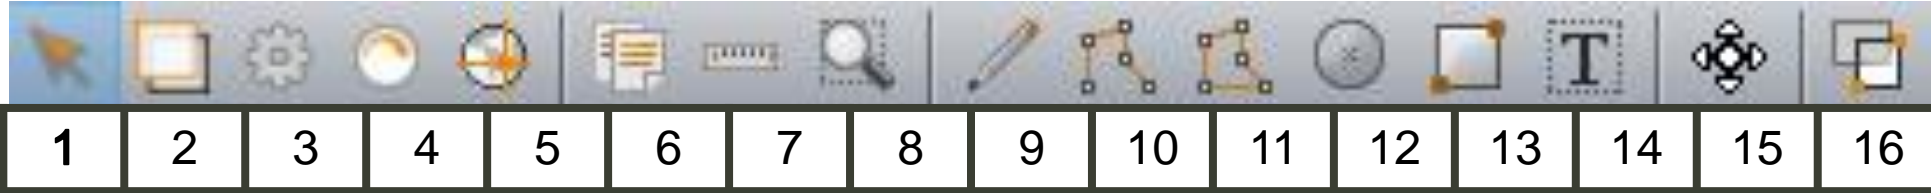

Zoom and Rotate using the upper right tool

Pan using the mouse or ↓ → ↑ ←

Zoom using the mouse scroll or + -

Other functions are done via the Map Toolbar
